

# Data Capping

Take control of data use and roaming charges with real-time visibility and easy-to-set threshold limits

## Data Capping Features

### Customisable data thresholds

Cap data allowance in MB by user, group and country. Once the threshold is reached, choose between blocking or simply alerting users. Alerts can be configured as push notifications via app or email.

### Data alerts and notifications

Set up customisable data alerts and notifications for all your users and admins.

### Team data usage reports

Monitor team's data usage in real-time and react instantly to any spikes in data consumption.

### Tethered traffic reports

Track hotspot usage with reports by MB.

### Prioritise business content

Set allowances for business-critical sites to be accessible, even when a cap is reached, to promote productivity.

### Data roaming restrictions

With overseas work more prevalent than ever, so too are roaming fees. This feature lets you manage data usage according to country.

### Granular controls

Set thresholds for specific users or groups to accommodate different data allowances or responsibilities. Policies can be conveniently tailored according to device type or geographical location.

### Any mobile device, any ownership model terms

Accommodates Apple, Windows and Android devices, so users can confidently work with the device they're most confident with without worrying about data usage.

## Keeping things simple.

You want to manage your data with minimal fuss and configurations. By setting a simple cap when people reach their data threshold, you can avoid excessive data charges. Data capping by Jamf gives users the controls they need to keep their data use and fees in check, with the option to add extra functionality if needed and when the costs arises.
