

# Keep employees connected and productive and data usage fair

**Jamf Data Policy enforces acceptable use, eliminates shadow IT, prevents excessive data spend and helps users manage their allowance across mobile, roaming and Wi-Fi networks.**

## **Establish acceptable use policies**

Extend your content filtering policies to your mobile devices to ensure unified compliance whatever platform your employees choose. Not sure what your policies should be? Jamf provides 'smart policies' based on your company priorities

## **Monitor for Shadow IT**

Prevent users from accessing unauthorised services to ensure sensitive data is not mishandled. Admins have the peace of mind that users will only be able to use company-issued services, thus helping you to comply with industry or corporate standards.

## **Manage usage in real time**

No need to wait to get your bill to see how much you have spent on data. Monitor usage in real-time, by user, time and country. Understand user behaviour with reports on site/app usage and use this to decide what your company policies should be. Users receive usage reports via their app, helping them to take more responsibility over their own usage.

# Features

## **Real-time policy control**

Determine which sites and apps should be used, and set different policies by group, country or traffic interface (cellular or Wi-Fi). Avoid unexpected overages from data-hungry sites by restricting them to Wi-Fi. Ensure data usage is compliant with your company's HR, IT and regulatory policies.

## **Any mobile device, any ownership model**

Data Policy supports all mobile devices and laptops, meaning you can select the device that's best for your business.

Jamf Data Policy works seamlessly with your existing IT services and technologies for a new level of insight and control without additional hardware investment.

Seamless integration with MDM, UEM, SIEM and SOAR solutions helps extend the value of your present technology infrastructure.

**“At Campari, we use Jamf Data Policy to control our mobile data usage. It is very simple to configure, including the deployment of Jamf’s security app and traffic routing profile over the air to our mobile endpoints without the need for our users to install anything. We’ve seen a strong ROI from using the product due to data cost savings and simple, integrated mobility management”**
